This work was supported by NSF-Earth Science grants EAR-044527 and 064302 to Evans, and EAR-0346190. Bradbury received supplementary support for sample analyses and travel to the IODP Gulf Coast Repository (GCR) from DOSECC, SEC Foundation, AAPG, SPWLA Foundation, and the GDI Foundation, and through the Peter McKillop Scholarship, USU Geology Dept. XRF analyses were performed by WSU laboratory. We thank Bradley Weymer and Phil Rumford at the GCR Laboratory for cutting and processing the SAFOD core, their patience in helping us to obtain our core samples, and for their efforts towards caring and preserving this core. This work has benefited from numerous discussions with Anthony Lowry and John Shervais. We are grateful for help from USU undergraduate student, Dave Richie, for sample preparation and some assistance with graphics.
